

Independent Franchise Partners, LLP
Emissions-Offsetting Statement – November 2021

Independent Franchise Partners, LLP is working with the Woodland Trust to absorb 6500 tonnes of carbon dioxide equivalent from the atmosphere through the planting of approximately 25,000 trees. This figure is significantly in excess of the estimated emissions created by the Firm since its foundation in June 2009. The Firm is also working with its landlord, British Land, which has secured a supply of renewable electricity supported by REGO certification. In this way, the Firm is fulfilling its goal of reducing its business carbon footprint within scope 1, 2 and 3 (business flights only) according to the Greenhouse Gas Protocol standard. In the future, the Firm intends to reduce its emissions further and take additional steps to offset emissions from its continuing operations.
